EEE 508: Term Project 1 - Grading Sheet

Group Number: _____   Name(s): _____

Submission Instructions

Submit by due date via Blackboard under Projects a zipped folder named LastNames_Project1.zip, where LastNames are the last names of the members in your group. The submitted zipped folder should contain:

1) Program (commented source code and compiled executable code) in a folder called Code. Make sure to provide sufficient comments in your code so your code can be easily understood.

2) README file listing the implemented feature detectors/descriptors/methods and their application; citing any existing code or part of code used; describing DETAILED, step-by-step, compilation and running instructions, and also listing the folders that are contained in the zip file with a brief description of their content. Also, in the README file make sure to indicate details about the system used to complete this project (e.g., using windows, VS 2015; or Mac using xcode; or other systems' description).

3) Input folder including the input data (images/videos and other) needed to run the code and to reproduce the simulation results to be included in the report (make sure your code is self-contained so that the TA can simply execute your code to reproduce your results; also if needed make sure to provide a complete explanation on how to run your code; the TA should be able to run and test your code without any changes).

4) Output folder including sample output results.

5) Report (pdf or word file).

6) This Grading Sheet with group number and names of group members.

Software Grading

README file including instructions	**/ 20**
Source code with comments and executable code	**/ 25**
Input data needed to run the code	**/ 15**
Output data	**/ 15**
Code execution	**/ 25**
Total	**/ 100**

Report Grading

Introduction	**/ 10**
Description of adopted feature detectors and descriptors and methods	**/ 35**
Discussion and analysis of the obtained results	**/ 45**
Conclusion and discussion of unsolved problems	**/ 10**
Total	**/ 100**
